ST|360

Altitude Selector/Alerter System

The ST-360 is a unique system which significantly lowers cockpit workload. It provides pre-selected altitude capture, digital vertical speed input, and aural and visual alerting at selected altitudes.

Features/Functions

- digital vertical speed select for climb or descent.
- pre-select and capture altitude; with visual and aural alerts.
- alerts if aircraft departs selected altitude.
- selectable DH (decision height) or MDA (minimum descent altitude), with visual and aural alerts.
- monitor outputs of altitude encoder.
- automatic vertical speed reduction prior to altitude capture.

Specifications

- panel mounted programmer/annunciator with LCD display
- completely case-contained
- requires input from aircraft's altitude encoder.
- power required-14/28 VDC
- weight-1.25 lbs.
- dimensions-1.6 x 3.42 x 6.75 in.
- approved to TSO C9c
- available as an option for S-TEC autopilot systems with altitude hold and vertical speed control.
